What Makes Us Different

Industry Specific:

The modules can be integrated wisely based on the industry. Wholesale and retail businesses, the hospital and hotel industry, construction and education sectors, private or public sector and all other industries across the globe are relying on this application for efficient operation.

Omni-Channel Sales

Odoo is the only software in the world that allows you to integrate all of your sales channels: Online Sales (eCommerce), Inside Sales (CRM)and In-Store (Point of Sale).

Proven Product:

About 3+ million people are growing their business by using Odoo. Eg: Toyota, Hyundai, PCI

All-in-One: Odoo is an all-in-one ERP system, which means that it provides a comprehensive suite of applications that cover all aspects of business operations, including sales, CRM, accounting, inventory, manufacturing, and more. This eliminates the need for businesses to use multiple software systems, reducing complexity and increasing efficiency.

Plenty of Applications:

odoo being a community support ERP solution, Odoo partners and community are also frequently contributing to the development of the ERP. The App Store of Odoo offers over 10000 applications for clients.

You can pick the most suitable connector app from the App Store with no struggle. Odoo Apps guarantees 100 per cent user-friendly support with no technical glitches.

Open-source:

As an open-source software, Odoo is free and accessible to anyone, and can be customized by developers to suit specific business requirements.

Framework:

Odoo is not just an ERP System it is a framework you can develop any kinda of application that suits your business or your sector's requiremet and install it in your running odoo ERP, the app can be a standalone or can be integrated with the other sub-system in odoo.

User-friendly interface:

Odoo offers you the best interface with many options to customize your interface.
Odoo ERP allows graphic, list, and pivot views of reports and facts, enabling the users to have a glance at the facts. The views are designed to help even the less skilled person to use the tool the perfect way.

Integration:

Do you wish to merge some features of different software tools to improve the performance of your application? Then Odoo is the best choice. This is because Odoo not only permits the integration of Odoo modules but it also supports the integration of Odoo applications with third-party applications to make your tool more effectively.

This will support you to manage different operations like eCommerce and Customer Relationship management with the same ERP tool. In addition, we can also integrate payment gateways and shipping platforms with Odoo for speedy business deals.

Mobile-ready:

The software is mobile-ready in both android and ios, allowing users to work on the go with the convenience of their mobile devices.

Community support:

Odoo has a large community of users and developers who offer support and actively contribute to the development of the software.

User-Friendly Interface: Odoo has a user-friendly interface that makes it easy for users to create, customize and generate reports.

Reporting

Customizable Templates: Odoo reporting offers a range of customizable templates that can be easily adapted to meet specific business needs. This allows users to generate reports that are tailored to their individual requirements.

Real-Time Reporting: Odoo reporting is capable of generating reports in real-time, providing users with up-to-date information to make informed decisions.

Integration with Other Modules: Odoo reporting is integrated with other modules, such as Accounting, Inventory Management, and CRM. This enables users to generate reports that provide a comprehensive overview of business performance across different functions it can also be integrated with the newly developed apps you are going to implement if you have something in-mind.

Multi-Language Support: Odoo reporting supports multiple languages, allowing users to generate reports in their preferred language including ethiopian local languages (Amharic, Tigrigna, Oromifa, Somali, Afar etc). the multi language support is not only for reporting its also for the entire sub-system user can use the system with his prefered language.

Overall, Odoo's centralized management, intersector transactions, consolidated reporting, customization, and scalability make it an ideal ERP system for multi-sectors or bureaus operations.

Platform Based

Multi-company management: Odoo allows users to manage multiple companies, organizations, public and private sectors from a single application. Users can create separate databases, manage different chart of accounts, and configure different settings for each company.

Centralized data management: Odoo provides a centralized database for all the companies. This enables users to access and manage data across multiple companies with ease.

Customizable reports: Odoo allows users to create customized reports for each company, which enables users to get a clear picture of each company's financial performance.

Integrated applications: Odoo offers integrated applications for sales, CRM, inventory, accounting, purchasing, and project management. This enables users to manage all aspects of their business operations in one platform.

Streamlined process: Odoo offers a streamlined process for multi-company management, which improves efficiency and reduces the risk of errors.

Intercompany Transactions: Odoo allows you to perform intercompany transactions, such as intercompany billing, intercompany transfers, and intercompany loans, with ease. This feature streamlines the process of managing multiple companies and ensures that transactions are accurately recorded.

Scalable: Odoo is highly scalable, allowing you to add new sector and users as your city government bureaus, authorities, agencys grows. This feature ensures that the system can accommodate your city government needs as you expand.

Customizable: Odoo is highly customizable, allowing you to tailor the system to meet the specific needs of your multi-sectors operations. You can customize workflows, reports, and dashboards to ensure that the system meets your unique requirements for each sectors, bureaus, authorities and agencys.

Odoo community Features

The Tria-Odoo community edition is free to use Odoo software with capabilities to manage a moderate level of business operations effectively. Best suitable for enterprises with less than 50 users, the Tria-Odoo community edition is capable of providing distinctive operational tools. This page describes the Tria-Odoo community features that fall under each of the modules of the platform.

Tria-Odoo community

Tria-Odoo ERP version is based on the odoo community which is a fully open source edition released under LGPLv3 license. Developed and tested by OCA, Tria-Odoo is a paid version that can be installed to meet business requirements. Availability of a number of customizable modules suitable for business operations makes it a good companion for business firms. A few limitations of Odoo community compared to Odoo Enterprise are the lack of unlimited functional support, version upgrade and hosting assistance but with Tria-Odoo version the limitations are eliminated. Mobile version are also supported by Tria-Odoo Version. Full-fledged use of Sales, HRMS, Website, eCommerce and other modules also is not possible with Odoo community but Tria-odoo Makes it possible.
